Product XML with DTD Definition

The following is an XML structure with a DTD definition for product information:

```
<!DOCTYPE products [
    <!ELEMENT products (product+)>
    <!ELEMENT product (#PCDATA)>
    <!ATTLIST product
        partsno ID #REQUIRED
        price CDATA "open">
]>

<products>
    <product partsno="P001" price="100">Product A</product>
    <product partsno="P002" price="200">Product B</product>
    <product partsno="P003">Product C</product>
</products>
```

The DTD ensures the following:

- The product element allows character data for product names.
- The partsno attribute must be unique and required for each product.
- The price attribute must not contain special characters like # or @.
- The default value for price is "open" if not explicitly specified.

Welcome to XYZ College

Change

XYZ College offers a world-class education in a diverse environment. Our mission is to prepare future leaders with a focus on academic excellence and community impact.
